Re: Sanitary Landfill Permit #1972-5

Dear Mr. Clark:

This letter is in reference to a phone conversation and a letter I received from the Village of Park Forest regarding their request to dispose in our landfill from 5,000 to 6,000 cubic yards of lime sludge from their water treatment plant operation, which consists of 60% water by volume and solid components consisting of 84% calcium carbonate and 15% magnesium hydroxide, with 5% miscellaneous material. They have been disposing of this material at our landfill site for many years and the Environmental Protection Agency has been issuing us a supplementary permit to dispose of this material.

We will dispose of this in the same manner as we have in the past years, by dumping it on top of a filled in area and then as the water seeps out into the refuse and the solids dry out we will mix these solids with clay, as we have in the past, and use it for cover material.

As the attached photostat copy of their letter requesting permission to dispose of this sludge indicates, they are very anxious to begin disposing of this sludge as soon as possible. However, we informed them before they could start disposing of this sludge we would want a supplementary permit from the Environmental Protection Agency, as in the past years, to take in this material.

We would very much appreciate your taking prompt action on this so we can accommodate the Village of Park Forest as soon as possible.

Please forward a copy of your letter to Mr. B. W. Osterling, Director of Public Works, Village of Park Forest, 200 Forest Boulevard, Park Forest, Illinois 60466.

Mine very truly,

INDUSTRIAL BUILDING OPERATIONS
